K. M. Creer, MA, PhD, ScD, *Department of Geophysics, University of Edinburgh.*
F. A. Dahlen, PhD, *Department of Geological and Geophysical Sciences, Princeton University, Princeton, New Jersey 08540, USA.*
J. W. Dewey, PhD, *US Geological Survey, Stop 968, Box 25046, Federal Center, Denver, Colorado 80225, USA.*
J. A. Hudson, MA, PhD, *Department of Applied Mathematics and Theoretical Physics, Silver Street, Cambridge CB3 9EW.*
R. L. Parker, PhD, *IGPP, A-205, University of California, San Diego, La Jolla, California 92093, USA.*
H. Rishbeth, MA, PhD, ScD, *Appleton Laboratory, Ditton Park, Slough SL3 9JX.*

The *Geophysical Journal of the Royal Astronomical Society* accepts papers on all geophysical subjects; work on the upper atmosphere is included when it is associated with the Earth, as for example magnetic effects at the Earth due to upper atmosphere occurrences. Review articles are included, together with summaries of palaeomagnetic observations, letters to the editors and book reviews. Papers containing a high proportion of diagrams or tabular material, however, cannot be accepted, but may be published in *Geophysical Memoirs.*

Geophysical Journal is published on the first day of each month; three issues constitute a volume, so that there are four volumes each year. Subscribers receive automatically and without further charge current issues of *Geophysical Memoirs,* which appears irregularly. The Royal Astronomical Society also publishes the *Quarterly Journal, Monthly Notices of the Royal Society* and *Memoirs.*

All the Society's journals are published by *Blackwell Scientific Publications Ltd, Osney Mead, Oxford OX2 0EL, UK.*

Subscription orders and all correspondence and remittances relating to subscriptions should be addressed to the publishers, with the exception of orders etc., from members of the Society, who should communicate direct with the Executive Secretary of the Society. *A list of subscription rates appears at the end of each volume.*

Back numbers of volumes of *Geophysical Journal* published from 1958 to July 1965 (Volumes 1–9) should be ordered from the Society; orders for Volume 10 (September 1965) and following should be sent to the publishers.

This journal is covered by *Current Contents.*

Royal Astronomical Society

The interests of the Royal Astronomical Society cover the whole field of astronomy, geophysics and the solar-terrestrial environment. Members of the Society may buy *Geophysical Journal* and *Monthly Notices* at a reduced price. They also receive *Quarterly Journal* free of charge. In addition, members have the use of an extensive Astronomical and Geophysical library.

Enquiries concerning membership of the Society should be addressed to *The Executive Secretary, Royal Astronomical Society, Burlington House, London W1V 0NL, UK.*

SUBJECT INDEX

PAGE

Book reviews 494

Deformation and creep

A kinematic viscoelastic model of the San Francisco earthquake of 1906, *John R. Rundle and David D. Jackson* 441
Isostatic rebound and power-law flow in the asthenosphere, *S. Thomas Crough* 723

Dynamics of the Earth

Wobble and nutation of the Earth, *Martin L. Smith* 103

Earth tides

Effect of ocean tides on gravity tides in Japan: the case of M_2 tide, *T. Tanaka* 141

Earth's lithosphere

A model for the process of formation of the upper oceanic crust, *R. G. W. Kidd* 149

Earth's mantle

Upper mantle structure beneath the Fiji Plateau: seismic observations of second *P* arrivals from the olivine–spinel phase transition zone, *Cliff Frohlich, Muawia Barazangi and Bryan L. Isacks* 185
Upper mantle structure beneath the Mid-Atlantic Ridge north of the Azores based on observations of compressional waves, *L. Steinmetz, R. B. Whitmarsh and V. S. Moreira* 353
Stresses due to phase changes in subduction zones and an empirical equation of state for the mantle, *D. J. Woodward* 459
Upper mantle *P* structure on the ocean side of Japan–Kurile Arc, *Yoshio Fukao* 621
Isostatic rebound and power-law flow in the asthenosphere, *S. Thomas Crough* 723

Earthquakes

Far-field waveforms from an arbitrarily expanding transparent spherical cavity in a prestressed medium, *J. B. Minster and A. M. Suteau* 215
Fault plane solutions using relative amplitudes of *P* and *pP*. *R. G. Pearce* 381
A kinematic viscoelastic model of the San Francisco earthquake of 1906, *John R. Rundle and David D. Jackson* 441
Elastic relaxation coefficients for a spherical cavity in a prestressed medium of arbitrary orientation, *David G. Harkrider* 487
A numerical study of two-dimensional spontaneous rupture propagation, *Shamita Das and Keiiti Aki* 643
Near-field of a seismic source in a layered medium with irregular interfaces, *Michel Bouchon and Keiiti Aki* 669

Elastic wave theory

A variational approach to whole-Earth dynamics, *I. M. Johnson and D. E. Smylie* 35
Far-field waveforms from an arbitrarily expanding, transparent spherical cavity in a prestressed medium, *J. B. Minster and A. M. Suteau* 215
On admissibility of the solution to the multilayered seismic dynamic problem without consideration of multiples, *E. K. Lossovski and L. I. Osinovskaya* 279
Elastic wave propagation in model sediments – II, *K. Walton* 473
Elastic relaxation coefficients for a spherical cavity in a prestressed medium of arbitrary orientation, *David G. Harkrider* 487
A numerical study of two-dimensional spontaneous rupture propagation, *Shamita Das and Keiiti Aki* 643
Near-field of a seismic source in a layered medium with irregular interfaces, *Michel Bouchon and Keiiti Aki* 669
Use of the spherical layer matrix in inhomogeneous media, *L. Neil Frazer* 743

PAGE

Electromagnetic induction

A simple time-dependent solution of the geomagnetic ring-current problem, *Christine M. Davies* . . 23

Geodesy

A decomposition theorem for the transformation of local physical frames with geodetic interest, *Evangelos Livieratos* 739

Gravity field, Earth

Gravimetric geoid in the Northwest Pacific Ocean, *A. B. Watts and A. R. Leeds* 249
Free-air gravity anomalies in the world's oceans and their relationship to residual elevation, *James R. Cochran and Manik Talwani* 495

Gravity methods and surveys

Gravitational attraction of a vertical right circular cylinder, *Shri Krishna Singh*. 243

Inverse problem

Inversion of anisotropic magnetotelluric data, *F. Abramovici and Y. Shoham* 55
Two-dimensional magnetotelluric inversion, *David L. B. Jupp and K. Vozoff*. 333

Magnetic field, Earth

A simple time-dependent solution of the geomagnetic ring-current problem, *Christine M. Davies* . . 23
Some features of the variability associated with solar and lunar daily variations, *B. R. Arora and N. S. Sastri*. 235
Sunspot cycle influence on the geomagnetic field, *J. M. Harwood and S. R. C. Malin* 605

Magnetic methods and surveys

The validity of the geological interpretations of marine magnetic anomalies, *Stephen P. Miller*. . . . 1
Curie depth determination from aeromagnetic spectra, *R. T. Shuey, D. K. Schellinger, A. C. Tripp and L. B. Alley* 79
Magnetic anisotropy and fabric of redbeds of the Great Slave Supergroup of Canada, *D. I. Gough, Aziz-Ur-Rahman and M. E. Evans*. 685

Magnetic properties

A method for the removal of rotational remanent magnetization acquired during alternating field demagnetization, *J. W. Hillhouse* 29
A magnetic coupling occurring in partial self-reversal of magnetism and its association with increased magnetic viscosity in basalts, *John Petherbridge*. 395

Magneto-telluric methods and surveys

Inversion of anisotropic magnetotelluric data, *F. Abramovici and Y. Shoham* 55
The mapping of induced currents around the Kenya Rift: a comparison of techniques, *D. Beamish* 311
Two-dimensional magnetotelluric inversion, *David L. B. Jupp and K. Vozoff*. 333

Marine geology

The validity of the geological interpretations of marine magnetic anomalies, *Stephen P. Miller*. . . . 1

Normal modes of the Earth

Asymptotic overtone structure in eigenfrequencies of torsional normal modes of the Earth: a model study, *C. Wang, J. F. Gettrust and J. R. Cleary* 289
The effect of discontinuities in density and shear velocity on the asymptotic overtone structure of torsional eigenfrequencies of the Earth, *R. S. Andersen* 303
Inversion of the attenuation data of free oscillations of the Earth (fundamental and first higher modes), *A. Deschamps* 699
Use of the spherical layer matrix in inhomogeneous media, *L. Neil Frazer* 743

PAGE

Palaeomagnetism

A method for the removal of rotational remanent magnetization acquired during alternating field demagnetization, *J. W. Hillhouse* 29
A palaeomagnetic determination of the emplacement temperature of some South African kimberlites, *P. L. McFadden* 587

Phase equilibria

Stresses due to phase changes in subduction zones and an empirical equation of state for the mantle, *D. J. Woodward* 459
Elasticity and phase equilibria of spinel disproportionation reactions, *Robert C. Liebermann, Ian Jackson and A. E. Ringwood* 553

Physics of rocks

Elasticity and phase equilibria of spinel disproportionation reactions, *Robert C. Liebermann, Ian Jackson and A. E. Ringwood* 553

Potential theory

Gravitational attraction of a vertical right circular cylinder, *Shri Krishna Singh* 243

Seismology

A variational approach to whole-Earth dynamics, *I. M. Johnson and D. E. Smylie* 35
Upper mantle structure beneath the Fiji Plateau: seismic observations of second *P* arrivals from the olivine spinel phase transition zone, *Cliff Frohlich, Muawia Barazangi and Bryan L. Isacks* . . 185
On admissibility of the solution to the multilayered seismic dynamic problem without consideration of multiples, *E. K. Lossovski and L. I. Osinovskaya* 279
Upper mantle structure beneath the Mid-Atlantic Ridge north of the Azores based on observation of compressional waves, *L. Steinmetz, R. B. Whitmarsh and V. S. Moreira* 353
Fault plane solutions using relative amplitudes of *P* and *pP*, *R. G. Pearce* 381
Oceanic *Sa, E. G. Kausel, F. Schwab and E. Mantovani* 407
Upper mantle *P* structure on the ocean side of the Japan–Kurile Arc, *Yoshio Fukao* 621
